José Ottonello

Frontend Developer

About me

I'm a frontend developer passionate about React and your stack its ecosystem.
My goal is to develop products that provide innovative solutions satisfying the needs of those involved, working in team and offering my passion and enthusiasm for what I do.

Experience

- **E-commerce Vans**

For this proyect, I used functional components, hooks, libraries like React Router and Material UI, and Firebase to store the user's final purchase.

- **Online real estate agency**

I created this project with the objetive of providing a more efficient alternative in real estate, saving time and money and allowing users to visit and reserve properties from the web. For this I used HTML, CSS and JavaScript in addition to Bootstrap and SASS.

Knowledges

Languages	• HyperText Markup Language (HTML5) • Cascading Style Sheets (CSS3) • Programming Language JavaScript: Variables and data types, operators, flow control, functions, DOM, rest APIs, object and array methods, promises and async.
Libraries	Interface design: • Bootstrap, SASS, Material UI, Styled Components Interface development: • React: Hook implementation; functional and class-based components and their life cycle; performance and optimization. Integration of libraries like Redux, Formik, and React Router.
Database	• Relational database: SQL • non-relational database: Firebase
Tools	• Code editor: Visual Studio Code • Version control system: Git • Project Management Software: Notion
